Objective

Computer Science graduate seeking a software engineering role building full-stack and AI-powered applications. Experienced taking products from idea to launch across web, mobile, and backend, plus seven years of teaching experience explaining complex ideas clearly to people at every level.

Education

California State University, Fullerton — Fullerton, CA
Bachelor of Science in Computer Science, GPA: 3.6 — *July 2026*

Relevant Coursework: Artificial Intelligence | Applied AI | Machine Learning | Software Engineering | Databases

Projects

Foreman ↗ | *Python, FastAPI, React, OpenAI API, Docker, GitHub Actions* — Oct 2026 – Present

- Built an **AI intake system** for contractors that turns messy emails, texts, and call notes into structured leads, with a tool-calling chat agent, reply drafts, and RAG estimates from past quotes.
- Cut extraction **hallucinations from 5.9% to 1.4%** (97.3% field accuracy) by moving date math and name checks from the prompt into code; built **eval suites** with a CI gate that fails the build on regressions.
- Tested the chat agent against **26 simulated customers and 8 adversarial attacks**; caught a version that cut hallucinations but lost real leads, fixed with code-enforced gates (0 lost leads, 24/24 attacks blocked).

Backbeat ↗ | *SwiftUI, Node.js, PostgreSQL, Gemini API* — July 2026 – Present

- Built an iOS app that helps drummers create, practice, and track grooves and rudiments in one place; **shipped version 1.0 to the App Store** after beta testing on real devices through TestFlight.
- Developed an **AI groove generator** with Gemini 2.5 Flash that converts prompts into playable, notated drum patterns; kept the API key server-side and capped usage at 10 generations/user/month to control API cost.
- Engineered a **16-step sequencer** with AVAudioEngine drum synthesis, mixed subdivisions, and practice analytics including BPM tracking, streaks, and a 28-day activity heatmap; added JWT and Google Sign-In.

JobAgent ↗ | *Python, LangGraph, FastAPI, React, OpenAI API* — May 2026 – July 2026

- Built an AI agent that **scores resume-to-job fit from 0–100**, finds skill gaps, and rewrites weak bullets.
- Designed a five-node **LangGraph workflow** that rewrites and re-scores until reaching a target fit score or iteration cap, using GPT-4o for higher-quality rewrites and GPT-4o-mini for repeated scoring to control API cost.
- Streamed workflow steps through **Server-Sent Events**, added in-browser PDF parsing and per-pass score updates, and deployed the FastAPI backend and React frontend on Render.

Work Experience

Technical Consultant Intern — Oct 2026 – Present
TECHVITIS — *Beirut, Lebanon*

- Completing a structured consultant training track covering IT infrastructure, **cloud**, and **containerization (Docker)**, preparing for client-facing technical work.
- Deployed a **highly available Dockerized web app on AWS** across two Availability Zones behind an Application Load Balancer, verified by a live failover test; built an **NGINX reverse proxy with SSL** over private subnets.

Music Instructor — 2019 – Present
McCormick Music, Kidz Rock, Drum Path — *Orange County, CA*

- Taught drums to **50+ students** over seven years, adapting lessons to different ages, goals, and skill levels.
- Explained complex rhythms in clear, practical terms, helping students build confidence and make steady progress.

Skills

Languages: Python, TypeScript, JavaScript, Swift, C++, SQL, HTML, CSS
Frameworks: React, Node.js, Express, FastAPI, SwiftUI, Tailwind CSS, REST APIs
AI: LLM Evals, Structured Outputs, Tool Calling, RAG, LangGraph, OpenAI API, Gemini API
Data & Tools: PostgreSQL, pgvector, Pydantic, Docker, GitHub Actions, Git, Linux, pytest, Vitest
Spoken Languages: English, French, Arabic
